**Commission for the execution of an closing transaction:** Closing price in D<sub>7</sub> x 25 EUR x Transaction size x EUR/PLN exchange rate (at the moment of closing a position in D<sub>7</sub>) x Rate of commission for executing a transaction closing a position in CFDs on DE30.pro = 12646.0 x 25 x 1 x 4.2901 x 0.002% = 27.13 PLN

**Total cost of commission calculation:** PLN 54.16

**Cost of spread at the time of opening the position:** ½ spread (in Tick size) x 25 EUR x Transaction volume x EUR/PLN exchange rate at the moment of opening the position = 0.75 x 25 x 1 x 4.2882 = **80.40 PLN**

**Cost of spread at the time of closing the position:** ½ spread (in Tick size) x 25 EUR x Transaction volume x EUR/PLN exchange rate at the moment of closing the position = 0.75 x 25 x 1 x 4.2901 = **80.44 PLN**

Please note that the Target Spread for DE30.pro may expand depending on market conditions, in particular at the time of publication of macroeconomic data, limited market liquidity or holidays. The above value is illustrative.

**Cost of holding position for 7 days (swap points) - PLN 0** (on the DE30.pro instruments swap points for holding position for the next day are not accrued, unless there is a rollover during this period)

**Net profit(loss) for the Client:**  $((\text{Closing price} - \text{Opening price}) \times 25 \text{ EUR} \times \text{Position volume} \times \text{EUR/PLN exchange rate (for closing the position)}) = (12646.0 - 12606.5) \times 25 \times 4.2901 = \mathbf{4236.47 \text{ PLN}}$

Please note that the Transactional Spread for the GOOGLE instrument is variable, which means that it may change depending on market conditions. The value indicated above is an example.

The cost of maintaining position (swap point value): -15.3235 (swap points are accrued at the minimum trading step - for convenience, it has been assumed that they do not change over a given period. However, their value changes every week due to changes in market interest rates REFER to the swap point table

Cost resulting from the calculation of swap points (assuming that swap points do not change):  $\text{Transaction size} \times \text{Nominal value of } 1 \text{ lot} \times \text{Swap value in points} \times \text{Exchange Rate (USD / PLN)} \times \text{Number of rollover positions} = 1 \times 100 \times (-0, 153235) \times 3.5964 \times 155 = -8541.96 \text{ PLN}$

Swap points are calculated in the transaction system around midnight CET. For the calculation of the Cost resulting from the calculation of swap points, the Exchange Rate current at the time of calculating the swap points is always taken into account. The above value is averaged for the purposes of simplifying the example. REFER to the swap point table

Client's profit (loss): (includes the cost of changing the conversion rate):  $\text{Transaction result} - \text{Cost resulting from the calculation of swap points} - \text{Cost resulting from the calculation of commission} - \text{Cost arising from the spread} = (1526.8 - 10888) \times 1 \times 100 \times 3.5343 - 738,23 \text{ PLN} - 85,41.96 - 212.42 = 145564,20 \text{ PLN}$

Half-spread cost at the time of opening the position:  $1 \text{ Transactional Spread} \times \text{USD } 100 \times \text{Transaction size} \times \text{USD / PLN Exchange Rate (for position opening)} = 0.5 \times 1.00 \times 100 \text{ USD} \times 1 \times 3.5216 = \text{PLN } 176.08$

Cost resulting from half the spread upon closing the position:  $1 \text{ Transactional Spread} \times \text{USD } 100 \times \text{Transaction size} \times \text{USD / PLN Exchange Rate (for closing a position)} = 0.5 \times 0.20 \times \text{USD } 100 \times 1 \times 3.0000 = 30 \text{ PLN}$

Please note that the Transactional Spread for the GOOGLE instrument is variable, which means that it may change depending on market conditions. The value indicated above is an example.

The cost of maintaining position (value of swap points):  $-22.98525$  (swap points are calculated in the minimum trading step)

Cost resulting from the calculation of swap points:  $\text{Transaction size} \times \text{Nominal value of 1 lot} \times \text{Swap value in points} \times \text{Exchange Rate (USD / PLN)} \times \text{Number of rolled positions} = 1 \times 100 \times (-0.2298525) \times 3.3000 \times 155 = -11756.96 \text{ PL}$

Swap points are calculated in the transaction system around midnight CET. For the calculation of the Cost resulting from the calculation of swap points, the Exchange Rate current at the time of calculating the swap points is always taken into account. The above value is averaged for the purposes of simplifying the example.

Client's profit (loss): (includes cost related to the change of conversion rate):  $\text{Transaction result} - \text{Cost resulting from the calculation of swap points} - \text{Cost resulting from the calculation of commission} - \text{Cost resulting from the spread} = (1526.8 - 1088.8) \times 1 \times 100 \times 3 - \text{PLN } 642.15 - 11756.96 \text{ PLN} - 206.08 \text{ PLN} = 119010.81 \text{ PLN}$

The figures do not include your personal tax situation, which may also affect the rate of return and total investment costs.

Total cost incurred by the client in connection with the transaction:  $\text{PLN } 12605.19$

Costs to nominal value of the transaction ( $\text{PLN } 12605.19 / \text{PLN } 383178.25$ ):  $3.29\%$

The above calculation does not take into account the cost resulting from the spread. This cost is included in the prices shown in the transaction system.

Total cost incurred by the client in connection with the transaction:  $\text{PLN } 12605.19$

Cost to par value of the transaction at the time of opening (PLN 12605.19 / PLN 383 178.25) = 3.29%

The above calculation does not take into account the cost resulting from the spread. This cost is included in the prices shown in the transaction system.
